

REMARKS

Claims 1-13 and 15-20 are pending and under consideration. Claim 1 has been amended herein.

Using independent claim 1 as an example, this claim recites selecting a data source from a plurality of simultaneously available data source paths through which the logo image and/or sound is received.

The Examiner admits that Lee does not teach these features, but instead relies upon Brown. However, Brown does not teach multiple paths through which logo image and/or sound is received. Instead, Brown is generally directed to selecting a sequence of input devices during a presentation. Brown, Abstract. However, the information in Brown does not include logo information.

Furthermore, independent claim 1 recites storing video and/or audio data received through the selected data source path. Brown teaches the selection of various input devices 17. However, the reference does not teach a connection between the input devices 17 and the memory of the control panel. Instead, the memory stores the consumed power level of the projector 14. Brown, col. 7, ln. 16-17. Brown also teaches storing a quantity of internal command data. Brown, col. 8, ln. 10-11. Thus, there is no teaching that logo information can be stored.

Shekel does not overcome these deficiencies in Lee and Brown, and is not relied on by the Examiner to do so.

Accordingly, withdrawal of the rejection is requested.

There being no further outstanding objections or rejections, it is submitted that the application is in condition for allowance. An early action to that effect is courteously solicited.

Finally, if there are any formal matters remaining after this response, the Examiner is requested to telephone the undersigned to attend to these matters.

If there are any additional fees associated with filing of this Amendment, please charge the same to our Deposit Account No. 19-3935.

Respectfully submitted,

STAAS & HALSEY LLP
